- **Trackpad Navigation:** The optical trackpad provided precise cursor control, simplifying navigation and text selection. It was a more intuitive alternative to the touchscreens of the day for many users.
- **Multimedia Capabilities:** While not a flagship multimedia device, the 9380 offered basic music playback, video viewing, and image viewing capabilities, catering to everyday needs. These capabilities were sufficient for casual use.

email and messaging functionalities, and the 9380 carried this legacy forward with seamless integration and efficient management tools. Push email was a significant draw for many professional users.

- **App Support:** Although limited compared to modern smartphones, the 9380 offered access to a selection of apps via BlackBerry App World, providing functionality beyond core features.

However, the device also had its limitations. The resolution of the screen was relatively low by today's standards, and processing power was restricted compared to contemporary smartphones.
