- **Linear Equations in Two Variables and Graphing:** The next step involves extending the concept to two variables, learning how to graph linear equations, understand slope and intercepts, and solve systems of linear equations. This chapter introduces graphical representation and its relationship to algebraic solutions.

- **Exponents and Polynomials:** This section introduces the fundamental concepts of exponents and their properties. Students learn how to simplify expressions with exponents, perform operations with polynomials (adding, subtracting, multiplying, and dividing), and factor polynomials. This is where algebraic manipulation becomes more involved.
- **Rational Expressions:** This chapter delves into fractions containing algebraic expressions, teaching students how to simplify, add, subtract, multiply, and divide them. It's often considered a challenging section, requiring a solid understanding of factoring and simplifying expressions.

Applications and Extensions:

- **Applications of Linear Equations:** This section focuses on applying the knowledge gained in previous chapters to real-world problems. This often involves word problems and applications in various fields, such as geometry and finance.
- **Radical Expressions and Equations:** This chapter introduces radicals (square roots, cube roots, etc.) and equations involving radicals. Students learn to simplify radical expressions and solve radical equations.
