

Indian Treaty Making Policy In The United States And Canada 1867 1877

Indian Treaty-Making Policy in the United States and Canada (1867-1877): A Comparative Analysis

The period between 1867 and 1877 witnessed a significant shift in the relationship between Indigenous populations and the burgeoning nation-states of the United States and Canada. This era, marked by westward expansion and the consolidation of national power, saw a dramatic intensification of **Indian treaty-making**, a process that often proved deeply unequal and detrimental to Indigenous sovereignty and land rights. Understanding the nuances of **land cession treaties**, **reserve system creation**, and the differing approaches taken by both countries during this crucial decade provides critical insight into the ongoing legacy of colonialism in North America. This article will examine the **Indian treaty policy** of both the US and Canada between 1867 and 1877, highlighting key similarities, differences, and their lasting consequences.

The Context of Expansion and Nation-Building

Both the United States and Canada experienced rapid territorial expansion during this period. The American West, following the Civil War, became the focus of settlement and resource exploitation, while Canada actively pursued westward expansion, solidifying its control over territories stretching from the Atlantic to the Pacific. This expansion directly impacted Indigenous populations, whose traditional lands and ways of life were increasingly threatened. The concept of **assimilation**, though not explicitly stated in

the same manner in both countries, underlay much of the treaty-making process. Both governments aimed to manage Indigenous populations and acquire their lands, often employing policies designed to integrate Indigenous people into dominant settler societies.

American Indian Policy: A Focus on Removal and Allotment

The United States, having largely completed the removal of Indigenous peoples from eastern territories, focused on negotiating treaties to acquire land in the West. These treaties, frequently negotiated under duress and with little regard for Indigenous autonomy, often involved **land cession** in exchange for promises of reservations, goods, and annuities. However, these promises were often broken, leaving many Indigenous nations dispossessed and impoverished. The focus shifted, subtly but significantly, towards allotment, a system that aimed to break up communal land ownership and integrate Indigenous individuals into the American agricultural system. This process, foreshadowed in the late 1860s and gaining momentum in the decades to come, ultimately undermined tribal sovereignty and traditional land tenure.

Canadian Indian Policy: Reserves and the "Civilizing" Mission

Canada, while also pursuing westward expansion, approached treaty-making with a slightly different strategy. The creation of **reserve systems** became central to Canadian policy. Through treaties, Indigenous nations ceded vast tracts of land in exchange for reserves, designated areas where Indigenous people were to be confined. This system, while ostensibly providing a degree of protection, effectively confined Indigenous populations and limited their access to traditional lands and resources. The Canadian government's policy, driven by a paternalistic notion of "civilizing" Indigenous peoples, sought to integrate them into Canadian society through education and religious conversion, often undermining Indigenous cultural practices. The underlying goal, however, remained similar to that of the US: land acquisition and control.

Treaty Negotiation and Indigenous Agency

Despite the considerable power imbalance, Indigenous nations did not passively accept the terms imposed upon them. Resistance, both overt and subtle, manifested in various ways. Some nations negotiated

strategically, attempting to secure the best possible terms given the circumstances. Others engaged in armed resistance, fighting to defend their lands and sovereignty. However, the unequal power dynamic severely limited the ability of Indigenous negotiators to achieve equitable outcomes. The lack of genuine consultation and free, prior, and informed consent rendered many treaties inherently unjust and invalid from an Indigenous perspective. The use of **interpreters**, often unreliable and biased, further exacerbated communication barriers and contributed to misunderstandings.

The Role of the Military

The military presence played a significant role in shaping the treaty-making process in both countries. The threat of military force often loomed large over negotiations, influencing the willingness of Indigenous nations to accept unfavorable terms. The US Army's campaigns against Indigenous resistance, such as the wars against the Sioux and the Nez Perce, directly impacted treaty negotiations, creating an atmosphere of fear and coercion. Similarly, the Canadian government employed military forces to assert its control over western territories and to suppress Indigenous resistance to treaty-making and land appropriation.

The Legacy of Unequal Treaties

The legacy of the treaties negotiated between 1867 and 1877 continues to shape the lives of Indigenous communities in both the United States and Canada today. The dispossession of land, the violation of treaty promises, and the imposition of assimilationist policies have created profound social, economic, and political inequalities. Land claims, treaty disputes, and the struggle for self-determination remain central issues for Indigenous peoples in both countries. The understanding of this historical context is crucial for addressing these ongoing issues and working towards reconciliation.

Conclusion: A Comparative Perspective

The Indian treaty-making policies of the United States and Canada between 1867 and 1877, while exhibiting some differences in approach, shared a common goal: the acquisition of Indigenous land and the control of Indigenous populations. Both countries employed coercive tactics, disregarded Indigenous sovereignty, and ultimately broke many of the promises made in the treaties. The consequences of this

period of intense land dispossession and cultural disruption continue to resonate in contemporary Indigenous communities, highlighting the need for continued dialogue, redress, and reconciliation. Studying this historical period through a comparative lens allows for a more nuanced understanding of the enduring impact of colonialism on Indigenous peoples in North America.

FAQ

Q1: What were the major differences between US and Canadian treaty-making approaches?

A1: While both aimed for land acquisition, the US initially emphasized outright purchase and removal, followed by allotment. Canada focused more on establishing reserve systems, intending to confine Indigenous populations while ostensibly providing for their needs. However, both approaches ultimately led to significant land loss and dispossession for Indigenous communities.

Q2: Were Indigenous peoples ever truly consulted during treaty negotiations?

A2: Genuine consultation was rare. Negotiations were often conducted under duress, with limited understanding of the implications for Indigenous peoples due to language barriers and power imbalances. The treaties often did not reflect the true wishes or understanding of Indigenous negotiators.

Q3: What role did religion play in Indian treaty policy?

A3: Both countries employed religious institutions in their efforts to assimilate Indigenous populations. Missionaries played a significant role in education and conversion efforts, often working in conjunction with government policies aimed at cultural transformation.

Q4: How did these treaties impact Indigenous governance structures?

A4: The treaties significantly undermined Indigenous governance structures by transferring authority over land and resources to the respective governments. This led to the erosion of traditional leadership roles and the imposition of external systems of governance.

Q5: What are some of the lasting consequences of these treaties?

A5: Lasting consequences include ongoing land disputes, poverty, health disparities, and the persistent struggle for self-determination among Indigenous communities. The psychological and cultural trauma inflicted continues to impact generations.

Q6: Are there any ongoing efforts to address the injustices of these treaties?

A6: Yes, there are ongoing efforts in both countries focused on land claims, treaty settlements, and reconciliation initiatives. These efforts aim to address the historical injustices and work towards a more equitable relationship between Indigenous communities and the state.

Q7: What is the significance of studying this period today?

A7: Understanding this period is crucial for addressing present-day inequalities and for fostering meaningful reconciliation. It underscores the importance of Indigenous rights, self-determination, and the need for a just and equitable future.

Q8: What are some primary sources that shed light on this period?

A8: Primary sources include treaty texts themselves, government documents (correspondence, reports, etc.), missionary records, and Indigenous oral histories and accounts. Archival research in national archives and Indigenous community archives is essential for a thorough understanding.

A Comparative Analysis of Indian Treaty-Making Policy: United States and Canada (1867-1877)

The period between 1867 and 1877 witnessed a pivotal shift in the dynamic between Aboriginal peoples and the developing nation-states of the United States and Canada. This era saw the intensification of treaty-making, a process that consistently served as a tool for territorial expansion by the influential settler societies. While both countries employed treaties as a means to regulate Native populations and acquire their lands, the approaches and outcomes differed significantly, reflecting the distinct historical,

political, and social contexts of each nation. This article will delve into a comparative analysis of these treaty-making policies, highlighting their similarities and differences.

The American Context: A Policy of Assimilation and Removal

In the United States, the post-Civil War period saw a reinforcement of existing policies aimed at the suppression of Indigenous peoples. The dominant philosophy guiding federal policy was one of integration, a belief that Aboriginal peoples should abandon their traditional ways and adopt Western customs and values. This ideological underpinning profoundly shaped the treaty-making process. Treaties were typically viewed as a means to rationalize the acquisition of vast tracts of land in exchange for guarantees of assistance that were seldom fulfilled.

The infamous example of the Broken Treaties stands as a testament to this exploitative dynamic. The many treaties signed with various peoples throughout the West frequently resulted in the relocation of Indigenous communities from their ancestral lands, often through violence. The commitments of education contained within these treaties were generally ignored, leading to poverty and the destruction of Native cultures.

The Canadian Context: A Policy of Gradual Incorporation

In Canada, the approach to treaty-making differed in some important respects, though the ultimate goal of resource control remained the same. While integration remained an important objective, the Canadian government pursued a more measured strategy, emphasizing the integration of Native peoples into the Canadian country through a framework of treaties.

The Treaty System, negotiated primarily in the Prairie provinces and parts of Ontario, are a key example of this approach. These treaties, although fraught with their own difficulties, typically offered a more comprehensive framework for the management of Native lands and resources. The establishment of settlements within the treaties allowed for a degree of self-governance, even though this autonomy was often severely constrained by the power of the federal government. However, even this relatively more "benevolent" approach still led to the loss of vast territories and cultural disruption for Indigenous communities.

Comparing the Approaches: Similarities and Differences

Both the United States and Canada utilized treaties as instruments of political control over Indigenous populations. Both countries employed a blend of guarantees and pressure to secure land cession. However, the specific mechanisms employed and the overall outcomes varied considerably.

The American system was characterized by a more assertive approach to resource control, often leading to forceful conflict and the widespread relocation of Native communities. The Canadian system, while still resulting in the loss of land, was often characterized by a more negotiated (although still manipulative) process, although the resulting treaties were often inadequately explained and rarely honored in spirit.

Both approaches, however, consistently failed to adequately address the enduring requirements of Indigenous peoples, resulting in ongoing economic inequities.

Conclusion

The treaty-making policies of the United States and Canada between 1867 and 1877, though distinct in their specifics, shared a common thread: the subjugation and dispossession of Indigenous peoples. Both nations used treaties as a tool to further their own interests, often at the expense of the rights of Indigenous communities. Understanding the historical context and the inherent biases of these policies is crucial to addressing the lasting legacy of injustice and endeavoring towards redress.

Frequently Asked Questions (FAQs):

Q1: Were Indigenous peoples truly "consenting" parties to these treaties?

A1: The notion of "consent" in these treaties is highly contested. Despite treaties were nominally negotiated, the power imbalance between Indigenous nations and the state was enormous. Coercion, threats, and the unequal distribution of influence meant that "consent" was often a facade.

Q2: What are the lasting consequences of these treaty-making policies?

A2: The lasting consequences are profound and far-reaching. They include social disadvantage,

deprivation of land and resources, the erosion of cultural ways of life, and continuing trauma.

Q3: What lessons can be learned from this period for modern policy-making?

A3: It is critical to recognize the historical injustices inherent in these treaties. Modern policies must prioritize genuine negotiation with Indigenous peoples, respecting their self-determination, and actively working towards redress. Truth and reconciliation processes are crucial steps towards healing historical wounds.

Q4: How did these treaty policies differ from earlier colonial approaches?

A4: While earlier colonialism often operated through outright conquest and dispossession, the treaty-making period attempted (however unsuccessfully) to create a façade of legitimacy through written agreements. However, the power dynamics and outcomes remained largely the same, resulting in the displacement and disenfranchisement of Indigenous populations.
