FAQ

Q1: What is the difference between exploratory, descriptive, and causal research as discussed by Sekaran?

A1: Sekaran outlines these three main research designs. Exploratory research aims to explore a problem or issue, often when little is known. Descriptive research seeks to describe the characteristics of a population or phenomenon. Causal research investigates cause-and-effect relationships between variables. The choice depends on the research question and the level of existing knowledge.

Q2: How does Sekaran's approach handle qualitative data analysis?

A2: Sekaran acknowledges the importance of qualitative research and provides guidance on various qualitative data analysis techniques, such as thematic analysis, content analysis, and grounded theory. These methods allow for a rich, in-depth understanding of phenomena that quantitative methods might miss.

Q3: What are some ethical considerations in business research as highlighted by Sekaran?

A3: Sekaran emphasizes the importance of informed consent, maintaining confidentiality, ensuring anonymity, avoiding plagiarism, and being truthful in reporting results. Researchers must prioritize the ethical treatment of participants and maintain integrity throughout the research process.
