- **Brake Pad Inspection and Replacement:** Inspect your brake pads regularly for wear. Replace them when the wear indicator reaches the minimum thickness. Brake safety is paramount.
- **Chain and Sprocket Maintenance (if applicable):** Regular lubrication and adjustment (or replacement if necessary) of the chain and sprockets are critical for preventing premature wear and ensuring smooth shifting. This is particularly relevant for chain-driven models.
- **Coolant System Flush and Fill:** Regularly flushing and refilling the coolant system helps prevent overheating and maintains optimal engine temperature. This prevents corrosion and maximizes engine performance.
